We Stand With the Trees

The use of the Central Experimental Farm parkland and the Queen Juliana Park for the site of the New Civic Development means that over 600 trees will be destroyed.

After two weeks of attempting to protect the trees with our ***I Stand With This Tree*** project, where two of us attempt to get portraits of the trees and their protectors, we've decided to expand the effort by starting a ***We Stand With the Trees*** project, where hundreds of you can choose trees and make your picture with them.

This document is meant to help you identify which trees are in danger from the project. It comes from the "2021-08-04- Revised EIS and TCR- D07-12-21-0059.pdf" document produced by Parson's Engineering for The Ottawa Hospital as part of their "D07-12-21-0059" application for a Master Site Plan Approval that is before Ottawa City Council right now. The application will be decided in mid-October 2021.

This document contains a number of maps, the most detailed maps have trees indicated as "green" (to be kept) or "red" (to be removed) or a couple of other minor categories. All trees on the detailed maps are numbered.

The numbers lead you into the database list where tree names, size, condition and fate, along with a few other details, are given.

What we ask:
As well as you can, we ask that you try to picture yourself with an endangered tree. You can identify them on the map as endangered and in the database if you want to check their name and fate.

We expect that some people will not care what tree they are picturing – and that's certainly ok- but we also expect that many will. The detail in the database is for them – and for us since, if you identify your tree to us, we will keep track of what trees have been protected.

For other help in identifying trees, see the sidebar.

Have fun!

Or, We Lie With the Trees?

The purpose of our projects is to create a way for people to

- learn about and express their caring for the Farm trees
- create a visual record of the people of Ottawa who wish to align themselves with the preservation of arboreal life
- prevent the proposed massive destruction of trees on the Farm
- create a record of the trees should they be destroyed.

We Stand With the Trees- how it might work

We hope that you will take your picture with a tree, identify the tree on the following maps and in the database, write a few words about why you chose that tree or how you feel about the trees and then send that all to us so that we can put them all together to present in the most effective places.

Now, you might not be up for all that. We understand. But please understand that this effort will be most effective the more there are of you and the more complete the final submission can be. Having said that, we'll use what you give us. Tell us if we can use your name.

The database names trees. We have found that:

- It occasionally misidentifies them. They did this in March with no leaves or nuts.
- There are significant trees that were missed.

If you get into tracking down individual trees you can help us by:

- Letting us know when you find trees that weren't counted.
- Helping us correct the naming.

There are apps that can help identify the trees.

- **iNaturalist** - biologist level
- **Picture This**- simpler
